# Module 19: Notion, PRD Tools and AI Documentation

Build a product workspace in Notion, write and critique PRDs with AI, turn specs into tickets, and connect your docs to Claude.

AUTHOR

MODULE 19

# Notion, PRD Tools and AI Documentation

Build a product workspace in Notion, write and critique PRDs with AI, turn specs into tickets, and connect your docs to Claude.

≈ 6 h study

**Plans and AI features change**

Notion's AI packaging changed several times in 2026. Check notion.com/pricing before buying. Screens are **illustrative wireframes**.

---

## 19.1 Notion in one page

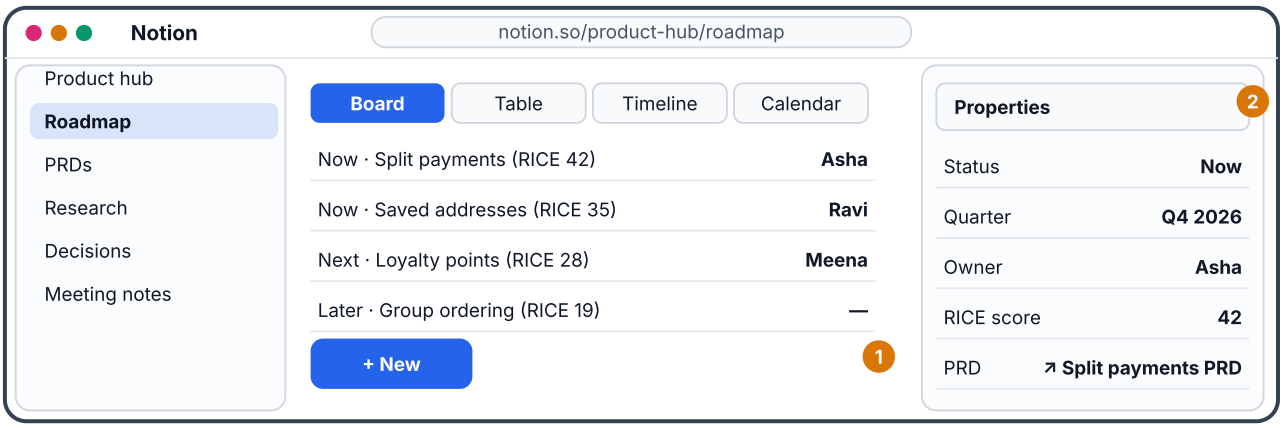

**Notion** is a workspace for documents and databases. Everything is a **page** made of **blocks** (text, headings, checklists, tables, images, embeds). A **database** is a collection of pages with properties, shown in different **views**. PMs use Notion for PRDs, roadmaps, research repositories, meeting notes and decision logs.

### 19.1.1 Plans (checked 23 Oct 2026)

| Plan | Price | AI |
|---|---|---|
| **Free** | $0 | A limited AI trial |
| **Plus** | per member, monthly | A limited AI trial |
| **Business** | about $20 per member a month | **Full Notion AI**: AI writing and Q&A, AI meeting notes, enterprise search, research mode, agents |
| **Enterprise** | custom | Business features plus admin and security controls |

Custom AI **agents** can use a separate credit meter on top of the plan. If your company already pays for Claude, you can do much of the AI work with the **Claude connector** instead (Lab 4).

# 19.2 Level 1 · Pages, blocks and databases

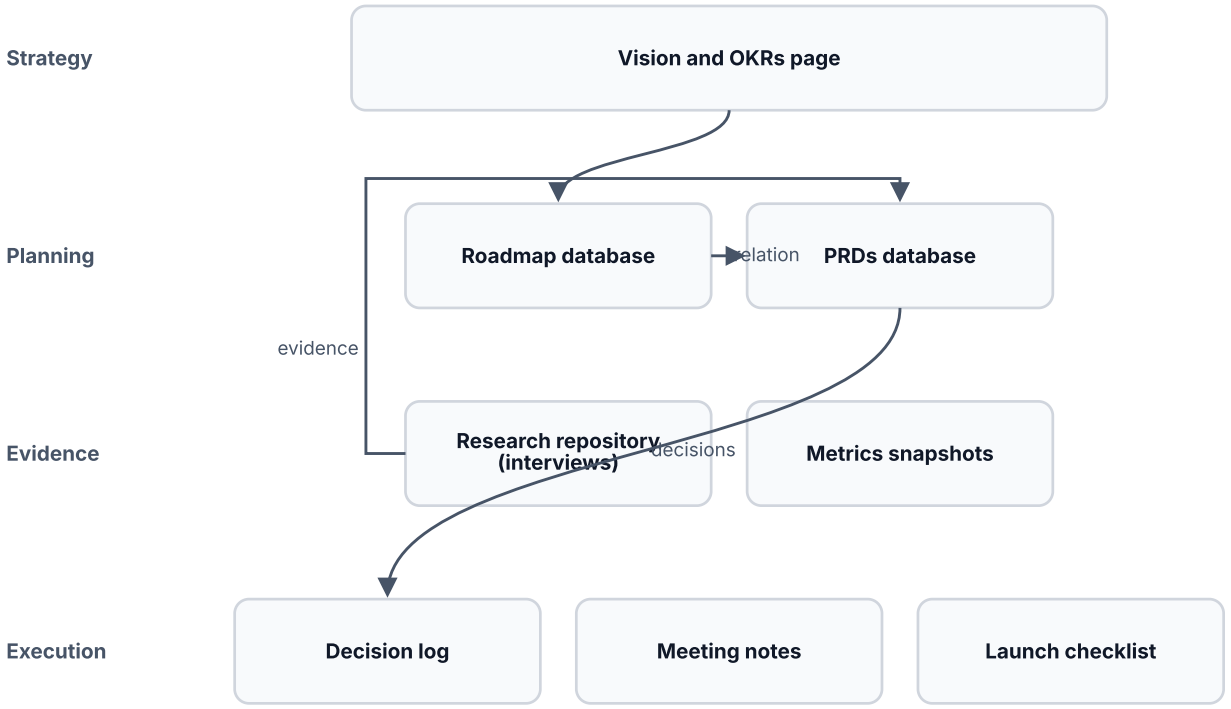

1. Each card is a page. Click + New and choose a template so every item starts with the same structure.
2. Properties hold the data you filter and sort by. 'PRD' is a relation that links to the PRDs database.

**A Notion roadmap database (board view) (illustrative wireframe, not a real product screenshot).** Same data, four views: board for stand-ups, table for scoring, timeline for planning, calendar for launches. The roadmap items are hypothetical.

### Level 1 · Beginner

- Type **/** to insert any block (heading, to-do, toggle, table, callout, database).
- Drag the ⋮⋮ handle to move blocks; turn any block into another type.
- Create a database with **/database**. Add properties: Status (select), Owner (person), Quarter (select), Score (number).
- Add **views** with **+** next to the view tabs, each with its own filter and sort.
- Share a page with **Share**; choose who can view, comment or edit.

# 19.3 Level 2 · A product hub that runs itself

**A PM product hub in Notion.** Relations connect the databases, so a PRD shows the roadmap item it belongs to and the interviews that support it.

**Level 2 · Working PM**

- **Templates**: create a PRD template inside the PRDs database (use `templates/01-prd-template.md` from this handbook). Every new PRD starts complete.
- **Relations and rollups**: link PRDs to roadmap items and interviews; roll up "number of supporting interviews" onto each PRD.
- **Linked views**: show "My open PRDs" or "This quarter's roadmap" on your personal home page.
- **Buttons and automations**: a button that creates this week's meeting note; a database automation that notifies Slack when Status changes to "Launched".
- **Integrations**: embed Figma frames, link GitHub pull requests, sync Jira or Linear issues.

# 19.4 Level 3 · Notion AI and connecting to Claude

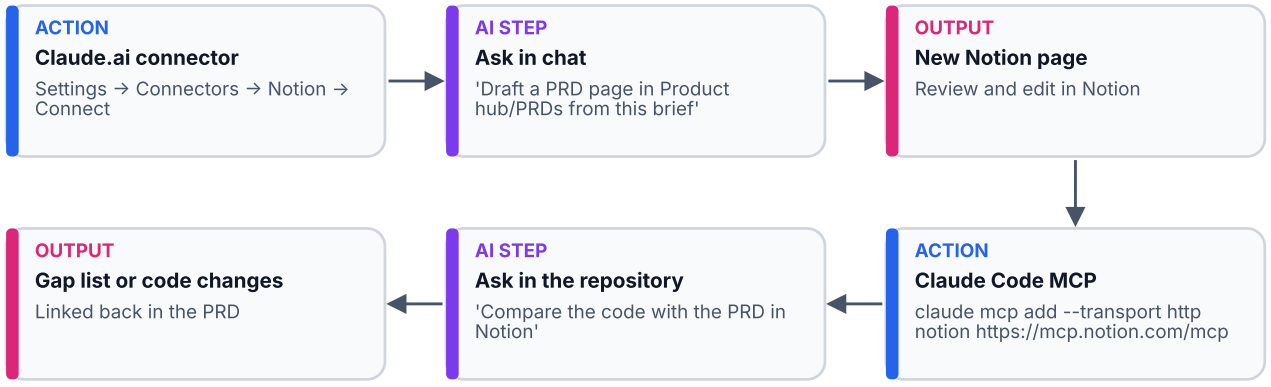

**Level 3 · Advanced**

Goal: let AI fill properties, summarise research, draft and critique PRDs, and work with your Notion pages from Claude and Claude Code.

## 19.4.1 Notion AI (Business plan)

- **Ask** questions across your workspace: "What did we decide about refunds?"
- **Write and edit** inside a page: draft, shorten, change tone, translate.
- **AI autofill** database properties, for example a "Theme" and "Sentiment" for every interview note.
- **AI meeting notes**: transcribe and summarise meetings into action items.
- **Research mode** and **agents** for multi-step tasks across pages.

## 19.4.2 Claude with Notion

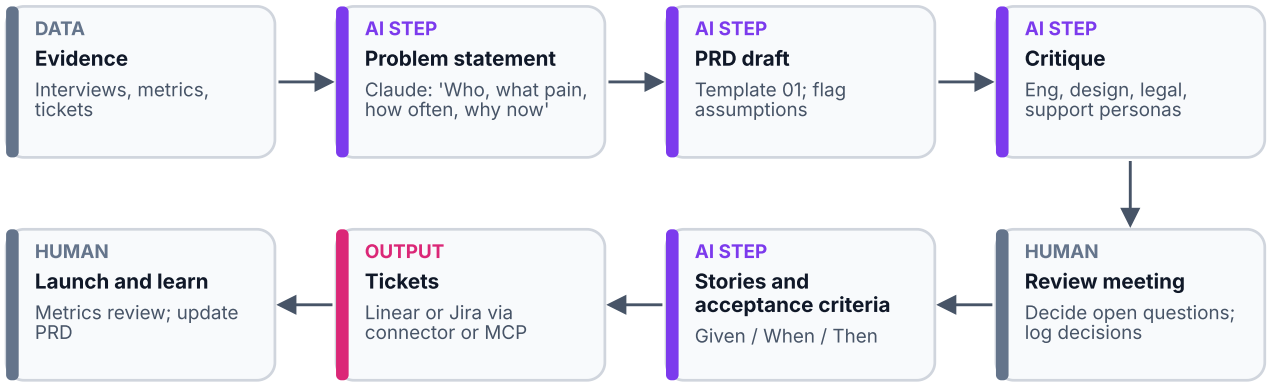

**Two ways to connect Claude and Notion.** You choose which pages the connection can access when you sign in. Start with a practice teamspace. Node types shown: Action · AI step · Output.

## 19.5 PRD tools compared

| Tool | Strength | AI help | Best when |
|---|---|---|---|
| Notion + Notion AI | Docs and databases in one place | Draft, autofill, Q&A, meeting notes | Your team already lives in Notion |
| Claude Projects + a PRD skill | Strongest reasoning and critique | Draft, critique, rewrite, tickets | You want quality writing and review; export to any tool |
| ChatPRD | Purpose-built AI PRD assistant | PRD drafts, coaching, templates | You want a guided PRD writer |
| Confluence + Atlassian Rovo | Enterprise wiki linked to Jira | Draft, summarise, search | Your company runs on Jira |
| Coda | Docs with formulas and tables | AI columns and writing | PRDs that need live calculations |
| Linear (docs and projects) | Fast issue tracking with project docs | Summaries and drafting | Engineering uses Linear |
| Jira Product Discovery | Ideas, insights and prioritisation | Summaries via Rovo | Discovery feeding a Jira delivery team |
| Productboard | Feedback to roadmap | Feedback insights | High volume of customer feedback |
| Google Docs + Gemini / Word + Copilot | Familiar documents | Drafting inside the doc | Company uses Google or Microsoft suites |

**Tools for writing and managing PRDs (checked 23 Oct 2026).** The tool matters less than the habit: one template, linked evidence, explicit decisions, and a review loop.

## 19.6 An AI-assisted PRD workflow

**From evidence to tickets with AI.** AI drafts and critiques; the PM owns the decisions and the final words. For AI features add an evaluation plan (template 09). Node types shown: AI step · Data · Human step · Output.

**The critique prompt that finds gaps**

"Review this PRD as four people: a skeptical engineering lead, a designer, a lawyer and a support lead. For each, list the top three questions and risks. Then list missing edge cases and any requirement that isn't testable."

## 19.7 Labs

**Lab 1 · Product hub in Notion (Free, 40 minutes)**

1. Create a page "Product hub" with sub-pages for Roadmap, PRDs, Research and Decisions.
2. Make Roadmap a database with Status, Owner, Quarter and RICE score; add board, table and timeline views.
3. Add five sample items.

**Lab 2 · PRD template (20 minutes)**

1. In the PRDs database, create a template from `templates/01-prd-template.md`.
2. Relate PRDs to Roadmap items.
3. Create one PRD from the template for "Split payments".

**Lab 3 · Research repository with AI tagging (30 minutes)**

1. Create an Interviews database: Date, Segment, Notes, Theme, Sentiment.
2. Paste five interview notes.
3. With Notion AI (Business): set Theme and Sentiment to AI autofill. Without it: ask Claude to tag the notes and paste the results back.

**Lab 4 · Claude writes into Notion (15 minutes)**

1. In Claude: Settings → Connectors → Notion → Connect; allow the Product hub pages.
2. "Create a PRD page in Product hub/PRDs for 'Saved addresses' using the template structure. Mark every assumption."
3. Open Notion, review and edit the page.

**Lab 5 · PRD to tickets (20 minutes)**

1. Ask Claude: "Turn the Split payments PRD into user stories with Given/When/Then acceptance criteria, grouped into three releases."
2. If you use Linear or Jira, connect it and create the tickets in a test project; otherwise paste into a table.

**Lab 6 · Compare two PRD assistants (30 minutes)**

Write the same one-paragraph brief into Claude (with Template 01) and into ChatPRD or Notion AI. Compare structure, accuracy, assumptions flagged and edits needed. Note which you'd use for what.

---

## 19.8 Common mistakes

- **A PRD graveyard**: no template, no status, no owner. Use a database with Status and Owner.
- **AI-written PRDs nobody reviewed**: always run the critique and a human review meeting.
- **Unlinked evidence**: relate PRDs to interviews and metrics, so decisions can be traced.
- **Sharing too widely**: check page permissions before connecting AI tools.

## 19.9 Exercises with model answers

**Exercise · Make it testable**

Rewrite this requirement with acceptance criteria: "Split bill should be easy."

**Model answer**

"As a diner, I can split a bill equally or by item among up to 10 people." **Given** a bill of ₹1,200 and three people splitting equally, **when** I confirm, **then** each person is asked for ₹400. **Given** item-wise split, **when** an item is unassigned, **then** I see 'Assign all items' and cannot confirm. **Given** amounts that don't divide evenly, **then** the remainder is added to the payer's share and shown clearly.

## 19.10 Key takeaways

- Notion = **pages + databases + views**. Relations turn separate lists into a connected product hub.
- Use **one PRD template**, link **evidence**, log **decisions**.
- AI drafts and critiques; **you decide**. Connect Claude through the **connector** or **MCP**.

## 19.11 Check your understanding

CHECK YOUR UNDERSTANDING

**Which Notion feature links a PRD to its roadmap item?**

A. A toggle block

B. A relation property

C. A callout

D. Page cover

**Why:** Relations connect pages across databases.

---

**What makes a requirement testable?**

A. Using the word 'easy'

B. Acceptance criteria such as Given / When / Then

C. A longer paragraph

D. Adding an emoji

**Why:** Acceptance criteria state observable conditions and outcomes.

---

## 19.12 Recommended resources

- Notion Help Center · Notion pricing · Notion MCP
- ChatPRD · Atlassian Rovo · Linear docs
- Handbook templates: 01 PRD, 02 one-pager, 09 AI PRD and evaluation
